

PARAGON™ JET ENGINE METROLOGY / STACKING SYSTEM

This complete Paragon workstation was designed by Eimeldingen-UK LTD specifically for the measurement and stacking of jet engine components. At the heart of the installation are Turbine Metrology's Paragon Circular Geometry Inspection system and TrueBuild Rotor Stacking system. Mechanical equipment consists of an Eimeldingen 1000mm diameter air bearing inspection table with integral leveling and centering, a 2500 mm twin column gauge stand, surface plate, and bi-level walkway. Turbine Metrology laser alignment tools and gauge head articulators are also included.

"PARAGON", "PARAGON Circular Geometry Inspection System", and "TrueBuild" are registered trademarks of Turbine Metrology LLC.
